

Sharedband Bonded Broadband TP Link WDR3600 Router Configuration Guide

Introduction

This document is to instruct you how to configure the Sharedband software on TP-Link WDR3600 routers.

Note: This guide assumes that the Router is not configured.

Preparation

Make sure you have the Sharedband user Details for the Community you wish to setup.

The Procedure

Step 1: Log onto the Web interface of the router (default address <u>http://192.168.3.17</u>). The default login is 'admin' and password 'Bonding123'.

Step 2: Click 'Settings' > 'Sharedband Service Configuration'.

Main Menu	Interfaces		
Settings Status	LAN settings		
Diagnostics	WAN connection setup (Ethernet)		
Contact Us	Sharedband		
Log Out	Sharedband service configuration		

Step 3: You should now be presented with a screen like this:

	Shared Faster Broad	Iband Iband Today	7
			Sharedband Service Configuration
>	Main Menu Settings Status Diagnostics Contact Us Log Out		username password 3 digit number ggregation Server IP fx . xx . xx . xx Save and reboot
		Copyright @	9 2008-2014 Sharedband Limited

The details required for this screen are those generated when creating the user on the Sharedband NOC. The only value which differs is the '**Node ID**' (1 - 8 depending on the Router number) for your WAN **Ethernet** connection.

Once completed click '**Save and reboot**', which will reboot the device. When it has complete it is safe to unplug the device.

Step 4: For router(s) 1-8, you will need to change the LAN IP of the router, which you will find under '**Settings**' > '**LAN settings**'. This is normally set to 192.168.3.**X** (**X** being the node number)

				LAN Settings			
Router LAN IP Address	192 . 168	. 3	. X				
Subnet Mask	255.255.255.0	~					
Enable DHCP server?	Yes 💌						
DHCP Address Range From	192 . 168	. 3	. 100				
DHCP Address Range To	192 . 168	. 3	. 199				
VRRP Gateway IP Address	192 . 168	. 3	. 250				
VRRP Subnet Mask	255.255.255.0	~					
	Save Save and reboot						

This is also where you can change the VRRP Address and Subnet for routed mode, this must be the same on all routers (for more information on routed mode, please contact support).

For the change to take effect, the router will need to be rebooted by clicking the 'Save and reboot' button.
